

# IV Session of the Regional Platform for Disaster Risk Reduction of the Americas

**Guayaquil - Ecuador**

## Program

**27 - 29 May 2014**

Secretaría de  
**Gestión de Riesgos**

Ministerio  
de Relaciones Exteriores,  
Comercio e Integración

**UNISDR**  
The United Nations Office for Disaster Risk Reduction

## Investing in DRR to protect development gains

### Background

The end of the 10-year commitment adopted by states, governments and other stakeholders around the world to reduce the impact of disasters in developing nations and communities is fast approaching. Indeed, the Hyogo Framework for Action 2005-2015 (HFA), the most relevant global reference document to further increase resilience<sup>1</sup> and reduce human and material losses caused by disasters, was adopted in Kobe, Japan, in February 2005.

The United Nations Office for Disaster Risk Reduction, UNISDR, facilitates the monitoring of the resulting agreements through a participatory system that brings together the various governmental and non-governmental stakeholders involved in disaster risk reduction (DRR) around a global platform and six regional platforms. These fully multidisciplinary, interagency and intergovernmental forums have facilitated the exchange of experiences, practices and mechanisms, along with the formulation of strategies, plans and programmes to inform decision-making and improve coordination for DRR.

The Regional Platform for the Americas will meet for the fourth time on May 27-29, in Guayaquil, thanks to the invaluable support of the Government of the Republic of Ecuador. This meeting ensures the continuity of a process of similar sessions held in Panama City, Panama (2009), Nayarit, Mexico (2011) and Santiago de Chile, Chile (2012), which are leading the way towards disaster risk reduction in the Americas.

The agendas of regional meetings are determined by an Advisory Board, composed of representatives of intergovernmental organizations such as CAPRADE, CDEMA, CEPREDENAC, REHU and OAS<sup>2</sup>; multilateral and international cooperation organizations with a presence in the region, including the World Bank (WB), Inter-American Development Bank (IADB), the International Federation of Red Cross (IFRC), the Technical Group of Donors, agencies of the United Nations system such as OCHA, PAHO-WHO, UNDP, ECLAC; the governments of the host country and the host of the previous session, and representatives of the private sector and academia.

<sup>1</sup> Resilience is defined as the ability of a system, community or society exposed to hazards to anticipate, resist, absorb, accommodate to and recover from the effects of a hazard in a timely and efficient manner, including through the preservation and restoration of its essential basic structures and functions.

<sup>2</sup> Comité Andino para la Prevención y Atención de Desastres (CAPRADE), Centro de Coordinación para la Prevención de los Desastres Naturales en América Central (CEPREDENAC), Reunión Especializada de Reducción de Riesgos de Desastres Socionaturales, Defensa Civil, Protección Civil y Asistencia Humanitaria (REHU), Organization of American States (OAS), Caribbean Disaster Emergency Management Agency (CDEMA)

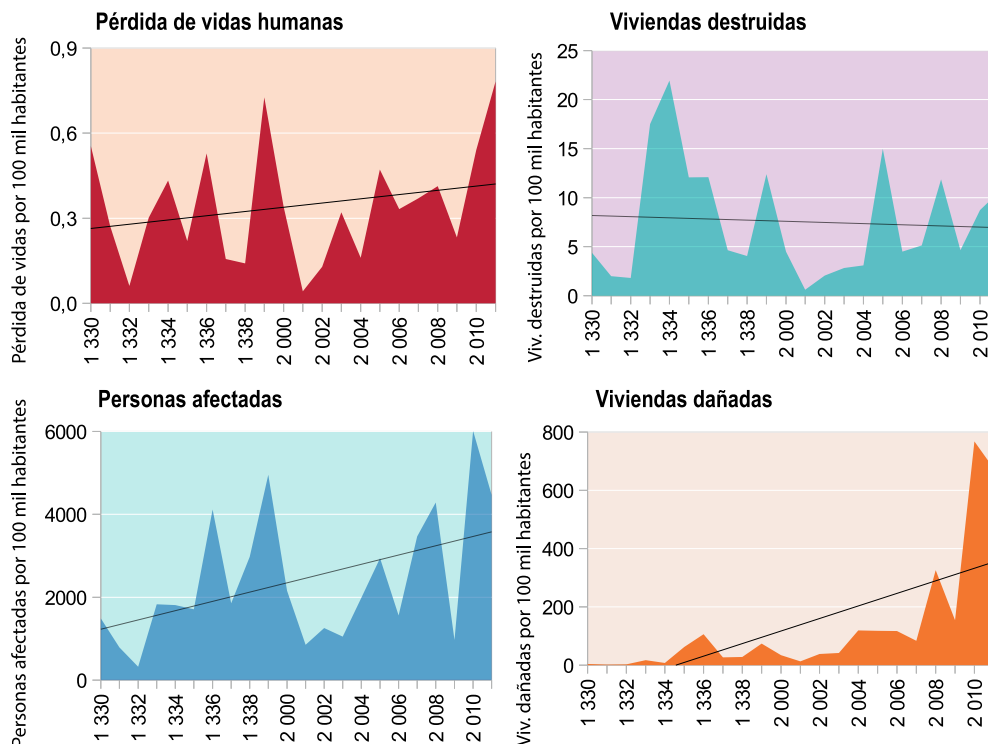

## The Context

As part of its development and poverty eradication policies and owing to the strong economic growth in recent years, countries in the region have been able to invest more in social infrastructure and development. When such developments do not meet the criteria for disaster risk reduction, the increase in exposure and vulnerability may cause an unwanted effect, coupled with complex urban environments with weak planning, land use and governance models.

Statistics show that the observed damage and economic losses are increasing in the region, particularly those related to intensive risk. That is, the impact of natural events of great intensity and low frequency in densely populated areas is high despite significant progress, including the development of legal and institutional frameworks for DRR, risk awareness and other strategies proposed in the HFA 2005-2015. Additionally, events of higher frequency and lower relative intensity (extensive risk) have a cumulative impact that is often exacerbated by unplanned urban development, weak governance, environmental degradation, and poverty and inequality.

To ensure the sustainability of the development achieved, it is necessary to mainstream specific DRR actions through various mechanisms including the participatory design of public policies with the active engagement of the public and private sectors, technical and scientific groups and civil society.

**Daños y pérdidas por cada 100 mil habitantes, eventos hidrometeorológicos y climáticos, 1990 - 2011**  
Manifestaciones extensivas del riesgo

## Building on the achievements

The Fourth Session of the Regional Platform for Disaster Risk Reduction of the Americas 2014, RP14, builds on the achievements of previous sessions, the results and guidelines issued by the Global Platform for DRR and looks ahead at the challenges of the new international post-2015 framework for DRR.

Some of the results that have helped to consolidate this tool and set work and coordination priorities include:

- The institutionalization of the Regional Platform for the Americas, as well as the strengthening of partnerships, the promotion of opportunities for cooperation and the dissemination of information.
- The establishment of the Advisory Committee as a deliberative support and advisory mechanism.
- The promotion of mechanisms for monitoring progress on the implementation of the HFA.
- The promotion of linkages between DRR and climate change adaptation (CCA), including the identification of their semantic and conceptual similarities and differences.
- The promotion of tools for monitoring and measuring public investment processes and other financial and economic aspects of DRR and CCA.
- Campaigns to boost the development of resilient cities along with their essential buildings such as schools, hospitals and others that must remain operational in emergency contexts.
- The identification of procedures to improve coordination between regional, national and local levels with the active participation of the community, civil society, the private sector and volunteers for disaster risk reduction.

***“The implementation of the National Decentralized Risk Management System makes progress at the local level.***

***Local decentralized governments (GADs in Spanish) advance on the formulation of risk sensitive development and land use plans, the structure of their risk management units (RMU), and the implementation of their risk reduction agendas (RRA)”***

***Risk Management Secretariat (SGR-Ecuador***

## A shared vision of development, disaster risk reduction and climate change adaptation

As the Hyogo Framework for Action (HFA 2005-2015) comes to an end and the subsequent agreement is made, it is important to recall its progress to date, as well as the challenges in implementation, and agree upon the elements that should be taken into account in future agreements.

Now that other instruments relevant to integrated risk management, namely, the United Nations Framework Convention on Climate Change (UNFCCC) and the post-2015 Sustainable Development Goals are under discussion, it is essential to further harmonize, integrate and mainstream DRR into poverty alleviation and sustainable development policies and programmes. Reducing the risk of disasters and building resilience is increasingly seen as part of a new development paradigm where welfare and equity are essential values, and natural and human resources are at the heart of planning and decision making.

***“Strategic risk management is a key factor for local sustainable development and should be based on the participation of the organized, trained and equipped communities, looking for resilient communities”***

***Óscar Samuel Ortíz, former Mayor of Santa Tecla and current Vice President of the Republic of El Salvador***

## Proposed Elements for the New International Post-2015 Framework for Disaster Risk Reduction

In 2012, the United Nations Office for Disaster Risk Reduction (UNISDR), mandated by the UN General Assembly, initiated a series of consultations to identify key elements that should be incorporated into the new international framework for disaster risk reduction.

The results of the consultations together with biannual country reports on compliance with the HFA, Global Assessment Reports (GAR 2009, 2011 and 2013), the relevant deliberations of the UN General Assembly and the abundant literature on the topic, have served as a basis to propose basic elements to guide the development of the new framework through the preparatory process for the Third World Conference on Disaster Risk Reduction, to be held in Sendai, Japan, in March 2015. The discussions of the Fourth Session of the Regional Platform for Disaster Risk Reduction of the Americas are expected to contribute to the 2015 Conference.

Below is a summary of elements that could guide the discussion for the design and implementation of the upcoming international framework for DRR:

- A new post-2015 paradigm that considers development management, risk reduction and climate change, including technological risks, where the broad vision of the concept of risk is common to all 3 global agendas.
- The potential to maintain an agenda of interrelated management and common support for development and resilience.
- The potential of linking the various reporting mechanisms (the HFA Monitor-improved, the Sustainable Development Goals - ODS and Climate Change). Development is not sustainable without a vision of disaster risk reduction, and public policy should take into account the private sector and civil society.
- Resilient development requires a strong commitment from various stakeholders. Therefore, some of the expected outcomes of the Third World Conference for Disaster Risk Reduction include:
  - a) The new international framework for DRR.
  - b) Voluntary commitments from other key DRR stakeholders.
  - c) A political declaration (expression of will).

***“It is clear from both the consultations and the exhaustive review currently underway of the HFA implementation that a lot has been achieved, particularly in the areas of policy and frameworks, early warning and disaster preparedness. However, much remains to be done, particularly when it comes to marshalling the arguments and resources for greater investment in reducing the underlying drivers of risk which fuel economic losses, increase exposure and threaten to increase vulnerability”.***

**Margareta Wahlström**

**Special Representative of the Secretary-General (SRSG) for Disaster Risk Reduction.**

## Objectives of the Fourth Session of the Regional Platform for the Americas

- Identify achievements and highlight the progress of the Hyogo Framework for Action 2005-2015.
- Provide an update on the status of implementation of the regional agreements/strategy recommendations of the Regional Platform with a view to presenting them at the 2015 World Conference on Disaster Risk Reduction.
- Identify specific areas of expertise in the region as a contribution to the new international framework for disaster risk reduction that can be shared with other regions globally.
- Recognize the linkages with other global processes to which the region can contribute (e.g. the Conference on Small Island Developing States, Water Summit, Education, COP20, Sustainable Development Goals).
- Provide stakeholders involved in integrated disaster risk management in the region with a common and inclusive space for reflection and analysis on the new international post-2015 framework for DRR.

## Expected Results

- National and local authorities along with various stakeholders from civil society, academia and the private sector actively participate and drive DRR and CCA agendas in the region.
- Meeting participants jointly identify and celebrate DRR and CCA progress achieved through the implementation of the HFA in the period 2005-2015.
- Participants from various sectors are involved in substantive consultation on the new international framework for DRR.
- From a national perspective, suggest the key issues or elements that should be considered or reinforced in the new international framework.
- Provide members of National Systems and the actors that drive development actions and programmes with useful insights on the trends and directions related to the proposal of the new international framework.

PHOTO: UNISDR

## Stakeholders

The session of the Regional Platform is an effort to involve the various stakeholders represented by intergovernmental agencies; national, sub-national and local governments; academia; the private sector and civil society; among others, in the deliberations.

The process seeks the active participation of different agencies involved in risk management, climate change adaptation, development planning and sectoral activities such as health, education, agriculture, public works, finance and economics, housing and environment

As the private sector is responsible for a significant percentage of investments in infrastructure, housing and others, it needs to be integrated and become part of the construction of public policies related to risk management.

In addition, academia has the capacity to generate methodologies, tools and general integrated processes to contribute to sustained and timely disaster risk reduction.

## Synthesis of the Agenda

The Fourth Session of the Regional Platform for the Americas includes an opening ceremony attended by the highest authorities of Ecuador and the United Nations Office for Disaster Risk Reduction. The Special Representative of the UN Secretary General, Margareta Wahlström, will give a short presentation on the expectations for the development of a new international post-2015 framework for DRR, and the national authorities will be responsible for the keynote speech and opening ceremony.

There will also be a High-Level Panel presented in a roundtable discussion format, with the participation of the Special Representative of the Secretary General for Disaster Risk Reduction and 6 ministers of state from countries represented at the meeting, moderated by a prominent international communicator.

## Four Thematic Sessions

1. **Childhood, Youth and Disaster Risk Reduction**, whose objective is to demonstrate the role of children, adolescents and young people in risk reduction as agents of change in the short, medium and long term including children with disabilities and others with ancestral knowledge. Priorities and contributions for the construction of the post-2015 framework agreement will be presented at the Children and Youth World Forum-Sendai 2015.
2. **Disaster risk reduction, climate change and the development agenda**, that aims to identify achievements, challenges and opportunities in mainstreaming DRR and climate change (CC) in development planning at the various territorial levels and areas of sectoral intervention.
3. **Governance and public policy for disaster risk reduction**, which is expected to introduce the general concepts on the subject, share tools to assess and measure governance and public policies for disaster risk management while disseminating some successful experiences in the region.
4. **Regional Consultation on the new post-2015 framework for DRR** in which participants will provide their views on the elements that should be included in the new international framework for DRR in light of the deliberations of the various sessions.

PHOTO: UNISDR

## Six Parallel Sessions

- 1. Gender-Sensitive Disaster Risk Reduction**, this session will explore the crucial link between women's experiences in the management of natural resources, empowerment and community resilience, adaptation to climate change and disaster risk reduction. It will analyse how these experiences could be harnessed to strengthen and increase the sustainability of entire communities.
- 2. Integration of the recovery and reconstruction processes in the new Post-2015 Framework for DRR**, where several successful experiences in the region will be presented along with the results of a regional consultation on critical aspects of recovery that should be included in the post-2015 framework.
- 3. Land planning as a key element for DRR**, which aims to identify major developments and challenges related to DRR mainstreaming, including those associated with climate variability and change, in land-use planning at national and sub-national levels.
- 4. DRR and South-South and triangular cooperation** will seek to identify lessons learned and challenges in the development and consolidation of the mechanisms that promote regional cooperation (horizontal/South-South, triangular) for DRR and Resilience and establish general guidelines to strengthen these mechanisms in the Americas, prompting a more explicit and concrete discussion for its promotion within the post-2015 framework.
- 5. The private sector and DRR for resilience**, the goal is to identify and promote DRR processes and mechanisms to engage the private sector. Identify the current situation, barriers and limitations and ways to enhance their action in support of DRR.
- 6. Mainstreaming scientific research to support resilience building**, seeks to analyse the processes and mechanisms for establishing linkages with the scientific community to influence public policy for DRR, showing that science is constantly used in DRR from a variety of scientific disciplines in the region, and analyse regional experiences that promote a more effective interaction of science, policy and practice in support of disaster risk reduction.

## Official Statements

Each delegation of sub-regional, regional, international, non-governmental or private organizations, and the various participating entities will have the opportunity to give a 5-minute (max.) presentation at the Fourth Session of the Regional Platform for Disaster Risk Reduction of the Americas (RP14).

## IGNITE Stage

The IGNITE Stage is a space where the participants of the Regional Platform will have 20 minutes to present relevant experiences, new projects or initiatives on disaster risk reduction. The purpose is to expand the range of issues discussed at the Regional Platform beyond those presented in the main sessions and parallel events.

PHOTO: UNISDR

## Special Sessions (by invitation only)

The Fourth Session of the Regional Platform offers the opportunity for various working groups to hold specific coordination and exchange meetings. This time, after-hours meetings have been planned with representatives of inter-governmental organizations, representatives of local governments, UN agencies, technical group of donors, focal points of national risk management and emergency response entities, and the Advisory Council of the Regional Platform.

## “IGNITE Stage del 27 al 29 de mayo de 2014”:

El IGNITE Stage es un espacio donde los Participantes de la Plataforma Regional tendrán 20 minutos para presentar nuevos proyectos o iniciativas sobre el tema de reducción del riesgo de desastres. El objetivo de este espacio es ampliar la gama de temas que se discuten en la Plataforma Regional más allá de los que se presentan en las sesiones principales y eventos paralelos.

Day and time	Title	Presenter	Organization
Martes - Tuesday 27 - 11:40 - 12:00	Hacia una adaptación resiliente en un Clima Cambiante	Dr.Michael Glantz	Hacia una adaptación resiliente en un Clima Cambiante
Martes - Tuesday 27 - 12:00 - 12:20	DESASTRES SOCIONATURALES	Carlos Villalba	Universidad Nacional de Rosario, República Argentina
Martes - Tuesday 27 - 12:20 - 12:40	REUBICACIÓN DEL BARRIO SANTO DOMINGO	MANUEL MAURICIO GUTIERREZ	ALCALDIA MUNICIPAL DE PALERMO HUILA- CMGRD
Martes - Tuesday 27 - 12:40 - 13:00	ECHO - Comisión Europea y su contribución a través de su programa de reducción de riesgos de desastres en LAC	ALVARO DE VICENTE	ECHO
